

Fire resistant modular container BMC 19.11

The fire compartment for the storage of packaged hazardous substances in accordance with PGS 15 in the Netherlands.

Suitable for both indoor and outdoor installation.

Fire resistant walk-in modular container, type BMC 19.11 is 60 minutes fire resistant in accordance with PGS 15:2016. The Bumax fire compartments are the only ones in the market to have been integrally assessed and type approved by the independent fire safety laboratory Peutz B.V.

SUMMARY OF RESEARCH FIRE RESISTANCE

Laboratory for Fire Safety

Summary examination of fire resistance of Bumax steel PGS-storage containers, series BMC Betreedbaar

The BMC Betreedbaar series are standard fire resistant module containers in accordance with PGS 15, equipped with single and/or double leaf hinged doorsets. For principle drawings please refer to report CA 1426-1-RA-002.

The table below provides an overview of the dimensions in which storage facilities will be produced and also the permissible dimensions.

t1 Overview of the permissible and applied dimensions of the BMC Betreedbaar series

Dimensions all sizes in [mm]	Permissible dimensions (external)		Applied dimensions (external)		Fire resistance till 60 min?
	minimum	maximum	minimum	maximum	
width of container	1000	unlimited	1350	8000	yes
depth of container	1000	4350	1200	2950	yes
height of container	1800	4250	2425	2805	yes
width single door	800	1690	standard 1470		yes
height single door	1650	2530	standard 2200		yes
width double door	1550	3725	standard 2770		yes
height double door	2110	3490	standard 2200		yes

Frame / roof / wall / door constructions: **R 60 / REI 90 / EI 60 / EI 60**
expressed in analogy with the European classification system

The fire resistance of BMC Betreedbaar fulfills the requirements described in PGS 15:2016*.

For PGS 8:2011**, the storage containers can be used for permanent storage or temporary storage up to a maximum of 1.000 kg.

The above applies only if the following conditions are met:

- The fire resistance of the floor on which the container is installed must comply with REI 60 (e.g. direct installation on a paved surface under which fire can not occur);
- BMC Betreedbaar can not be top loaded;
- The details of the storage containers must correspond with information stated in report CA 1426-1-RA-002.

* PGS 15:2016 – is a Dutch Standard with the aim of safe storage of packed hazardous substances
** PGS 8:2011 – is a Dutch Standard with the aim of safe storage of organic peroxides
